SKILLS & INTERESTS

AI & Data: AWS SageMaker, Amazon Bedrock, LangChain, Pandas, NumPy, Agentic AI, Model Context Protocol

Languages: Java, Python, C#, C++, JavaScript/TypeScript, SQL (PostgreSQL, MySQL)

Frameworks & Web: Angular, React, Ionic, FastAPI, Flask, Express, Unity, Storybook

Cloud & Infrastructure: Google Cloud (Associate Certified), GitHub, Dynatrace, Jira, MongoDB, AWS

EDUCATION

Ontario Tech University

Computer Science - Data Science Specialization | Mathematics Minor

- Presidents List

Oshawa, Ontario

Expected Graduation April 2027

WORK EXPERIENCE

International Business Machines

Platform Developer, Client Engineering (Technology Sales)

Toronto, Ontario

May 2026 - August 2026

- Co-engineered two custom POCs within live client infrastructure to showcase automated SAP OS patching and real-time SD-WAN monitoring, validating product value to build technical trust and accelerate deal validation.
- Delivered hands-on technical labs for executive and technical stakeholders, tailoring IBM enterprise solutions to align with client business objectives and drive platform adoption.
- Streamlined client planning workflows by co-developing an AI SDLC demo that aggregates telemetry and project data into automated cases to deliver data-backed timeline estimates.
- Engineered a custom Agentic Resource Allocation Model to dynamically generate sales organization charts, optimizing territory coverage to maximize seller productivity and pipeline coverage.

Bank of Montreal

AI Developer, Audit AI and Analytics

Toronto, Ontario

January 2026 - April 2026

- Co-developed an Agentic RAG chatbot, leveraging Angular, Flask, and AWS, translating complex compliance requirements into an intuitive search interface that accelerated audit research workflows.
- Built a SageMaker classification pipeline to quantify manual testing efforts, generating the data-driven insights used by leadership to justify BMO's automated control testing roadmap.

Software Developer, Platform Delivery

January 2025 - December 2025

- Enhanced app reliability for 3M+ active personal and small business banking customers by resolving security, design, and accessibility issues along with integrating Adobe Analytics in Angular and Ionic to improve digital customer retention.
- Improved production troubleshooting by implementing Dynatrace logging for Ionic plugins to quickly identify failure points and troubleshoot customer-reported issues.
- Increased user retention metrics by building a native session-handling feature that seamlessly managed timeouts and maintained strong user experience.
- Maintained alignment across 20 global development teams by updating the central component library, ensuring standardized design patterns and technical compliance across business units.

Tech Mahindra

Junior Software Engineer (Co-Op)

Toronto, Ontario

May 2024 - August 2024

- Developed a specialized financial Vertical LLM using Llama and Flask to demonstrate measurable time-savings in financial research workflows.
- Implemented end-to-end data pipelines, including unstructured data ingestion in MongoDB and custom validation frameworks, while delivering technical progress reports to key stakeholders to guide prototype strategy.

Ontario Tech University

Research Assistant - [SEER Lab](#)

Oshawa, Ontario

September 2024 - Present

- Developed a scalable digital implementation of the hybrid K-5 educational game Run Llama Run in Unity, extending the framework of a Master's research paper, enabling at-home learning.

Peer Educator

Incoming September 2026

- Accelerate concept and skill mastery by leading cohorts of 5 students in core Math and CS fundamentals, emphasizing system design while guiding best practices in AI-assisted development and systematic debugging.
